

ABACO - Coal

Advanced wear resistant dampers for tuning coal flow rates to burners.

Systems conceived and designed for high durability and maximum reliability and safe process operation.

Advantages of using ABACO - Coal:

- Typical unbalanced reductions from levels higher than $\pm 30\%$ to lower of $\pm 5\%$
- High regulation capacity with actuating margins higher than 30% of nominal flowrate
- Easy automation for Control Room management
- Wear and abrasion resistance guaranteed, by means of the utilization of anti-wear materials
- Safe inherent design, with mechanical protections for the avoidance of duct section blockage
- Design based and validated by means of fluid dynamics simulations
- Easy maintenance and element replacement
- Verification of ATEX Directive if necessary
