

SECURITY MANAGEMENT

CRITICAL INFRASTRUCTURE PROTECTION

How can security management critical infrastructure protection help you?

The new approach which emerges in society as well as in industry, entwines the normal operation, Industrial Safety(SAFETY) and the facility's protection, against deliberate actions and terrorist threats, which per se have be considered together and balanced for optimal management of the facilities.

Industry is continuously facing the challenge of having to ensure an adequate protection level for people, workers, and environment against threats such as terrorist attacks or sabotage of facilities. It has also to be done in a manner compatible with the business continuity.

Key benefits

- Business continuity
- Optimization of security and protection against terrorist and sabotage
- Improvement of crisis management (Including key aspects such as evacuation, search and rescue operation and control of corrective measures)
- Integration of information and communication systems.
- It helps to prioritize risk reduction actions
- Investment optimization
- Fulfillment of laws and regulation

Why INERCO?

- Wide experience and technical capacity for custom-made services
- Integral solutions in engineering, environment, occupational health and safety
- Accurate knowledge of the industry
- Independence, quality, accuracy and reliability

SECURITY MANAGEMENT

CRITICAL INFRASTRUCTURE PROTECTION

Our solutions

- Critical Infrastructure Protection Legislation (PIC law)
